## **Hazardous Waste Management**

Regulated entities that generate hazardous waste are required to control the waste with a "cradle to grave" management system under Resource Conservation and Recovery Act of 1976 (RCRA) and includes:

- Knowledge of applicable regulations
- Training of personnel about the requirements
- Identifying all sources of hazardous waste
- Obtaining a facility ID number, if necessary
- Establishing a waste minimization program to reduce or eliminate hazardous wastes
- Appropriately packaging, labeling and manifesting all hazardous waste generated
- Meeting standards for hazardous waste accumulation
- Complying with record keeping and reporting requirements

Since 1995, AEHS, Inc. has provided hazardous waste management services for twenty-four Satellite Accumulation Point (SAP) at Brooke Army Medical Center (BAMC) and supporting facilities. These services include training for SAP managers, quarterly inspections of all SAP sites, quarterly reporting of findings to Environment of Care Committee, routine monitoring of the handling of the hazardous wastes, as well as an active approach to seeking opportunities for recycling and waste reduction. Accountability within the program has increased. Training of SAP managers has increased from 77% to a steady 94%, with this increase in training has come a reduction in the quarterly inspection violations.

AEHS also performs a monthly inspection of the less than 90-day storage facility located at BAMC. Inspection items include but are not limited to, container dates and condition, aisle widths, safety inspections of showers, telephone connections, spill kits, and auditing of records. AEHS provides not only the training for the SAP managers, but also has the expertise to provide the required HAZWOPER training for the less than 90-day storage facility personnel. Other training provided includes:

- Materials Handling Equipment (Forklift Training)
- DOT Manifest Training
- OSHA Respiratory Protection Training
- Hazard Communications (HAZCOM)
